

Transfer Data Between PCs in a Quick & Hassle-Free Way

Whether you're moving data between computers sharing the same OS version, copying files and settings from a Windows 7 to a Windows 11 PC, or migrating from a 32-bit to a 64-bit system, FastMove will do the job.

Getting Started

Using FastMove to transfer data is very easy. Just follow these 3 simple steps:

- 1. Install FastMove on both PCs**
- 2. Select what you want to transfer**
- 3. Let FastMove do the rest!**

Fast and Lossless Data Migration for Windows

Move all your files, folders, software and settings from one PC to another. Whether you're moving data to a new computer or upgrading to an SSD, FastMove makes data migration fast, easy and reliable. The app supports data transfers between Windows 7/8/10/11, 32-bit and 64-bit versions.

Move Software in a Couple of Clicks

Installing all your software on your new computer takes a lot of time and effort. With FastMove, you won't have to re-download and reinstall your programs and then spend hours customizing them. Simply select the applications you want to move to your new PC and leave the rest to FastMove.

Transfer User Accounts and Settings

Setting up user accounts and configuring all the settings on a new computer is a tedious process. Using FastMove to transfer all user data and settings will help you to save hours. FastMove will seamlessly copy all user data including passwords, desktop settings, and other data.

Copy Compatible Device Drivers

FastMove takes the hassle out of installing drivers for devices you want to connect to the new Windows computer. Simply select the drivers you want to move and FastMove will identify and transfer compatible drivers. You'll be able to use all your devices out of the box without any conflicts whatsoever.

Move Custom Files and Browser Favorites

FastMove can also be used to move files from one computer to another in bulk. You won't have to upload your files to the cloud or copy them to a USB drive to transfer them. All your custom files, folders, and even browser favorites will be moved to the new PC in one go, with the folder structure intact.

Sync Folders Locally or Remotely

FastMove's Sync Folders tool will help you to sync and merge folders between PCs and locally. Simply select two locations, then let FastMove scan them and find which files are different or missing from one location. You can then select the files you want to copy between the two folders.
